Highend Console Table

Model H – Modular Executive Workstation

Product Description

The Model H is a premium modular workstation designed with a modern appearance, durable construction, and practical functionality. It features a quick-assembly frame with a snap-and-screw system that ensures easy and secure installation. Its flexible modular design allows multiple workstation configurations to meet different workspace requirements. The base is equipped with adjustable horizontal support feet for improved stability and a sealed cover plate with 86-type socket openings and wiring ports for convenient electrical connections.

The workstation includes an integrated transverse wiring groove beneath the cover opening, allowing cables to be arranged neatly and making electrical connections more efficient and organized. The worktop is made of 25 mm thick E0-grade solid wood, providing a smooth, durable, and comfortable working surface. For added user comfort, the control panel features a front-mounted black rubber armrest. Both metal side panels are equipped with Tiffany Blue anti-glare light strips, adding a distinctive modern appearance while improving visual comfort.

The workstation also features a 200 mm high aluminum profile screen that supports various display mounting systems, offering flexibility for different monitor arrangements. Its main frame is constructed from premium cold-rolled steel with a thickness of 1.5 mm, ensuring strength and durability. The front and rear door panels have a thickness of 1.0 mm, while the aluminum profiles are 2.0 mm thick. Overall, the Model H combines a strong structural design, efficient cable management, ergonomic features, and flexible display support to provide a reliable and well-organized workstation for modern offices and control room environments.

Model D-Modular Executive Workstation

Product Description

The Model D is a premium modular workstation designed to provide flexibility, durability, and convenience in modern office and control room environments. It features an innovative screw-free snap-fit frame that allows quick, easy, and flexible assembly without the need for conventional screws. The workstation base is equipped with adjustable horizontal support feet to ensure stability and proper positioning. Each workstation comes with a built-in keyboard drawer, a 19-inch equipment rack, and a dedicated tray, providing convenient storage and organized equipment management.

The operating surface is made of 25 mm thick E1-grade eco-friendly solid wood particle board, offering a smooth and durable workspace. For enhanced user comfort, a black rubber handrail is integrated into the front edge of the worktop. The workstation also features a 200 mm high aluminum screen panel that supports various monitor mounting systems, allowing flexible display arrangements according to operational requirements.

The main metal frame is constructed from premium cold-rolled steel plate with an overall thickness of 1.5 mm, ensuring strength and structural durability. The front and rear door panels are 1.0 mm thick, while the aluminum profiles have a thickness of 2.0 mm. All metal components are finished with a flexible matte coating, providing a refined appearance and a smooth surface. Overall, the Model D combines easy assembly, practical storage, ergonomic design, and durable materials to create an efficient and professional workstation solution.

Office Control Console- YQ-DZ-01

Product Description

The workstation is designed with an advanced cable management system that physically separates high-voltage and low-voltage wiring to reduce electromagnetic interference (EMI) and maintain reliable signal quality. This ensures a safer, cleaner, and more organized working environment for sensitive electronic equipment.

Its modular design allows flexible customization according to site dimensions, workspace requirements, and equipment layouts. Custom sizes, colors, and configurations are available upon request, making it suitable for different operational environments and project requirements.

The workstation features a modular assembly system with patented screwless fasteners, allowing quick, convenient, and efficient on-site installation. Its optimized packaging design also makes transportation and overseas shipping easier and more cost-effective.

For long-term performance and reliability, the workstation is built with a heavy-duty 1.5 mm steel frame and comes with a 10-year structural warranty. Standardized components make maintenance easier and ensure convenient access to replacement parts when required.

Material quality and environmental safety are also key priorities. The workstation complies with RoHS environmental standards and uses E0-grade particle board with low formaldehyde emissions. Its eco-friendly coating further supports better indoor air quality, making it a suitable choice for modern and environmentally conscious workplaces.

HG-A1 – Modular Smart Control Console

Product Description

The HG-A1 Modular Smart Control Console is a modern, ergonomically designed workstation that combines advanced technology, stylish aesthetics, and practical functionality. Featuring a sleek ice-blue lighting design and a premium full-metal exterior, it offers a distinctive and professional appearance for modern control rooms and monitoring environments. Its innovative aerodynamic swallow-tail structure moves beyond traditional workstation designs, providing a streamlined look while ensuring user comfort and operational efficiency. The modular configuration allows flexible arrangements to accommodate different workspace requirements and equipment layouts. It also features a rear-mounted smart display system that supports convenient customization and integration of display equipment. With its contemporary design, refined metal finishing, integrated lighting, and user-focused layout, the HG-A1 delivers an advanced and organized working environment for command centers, security monitoring rooms, operation control centers, and other professional technical facilities.

HG-A2 – Modular Smart Control Console

Product Description

The HG-A2 Modular Smart Control Console combines elegant design, practical storage, and advanced functionality to create an efficient and comfortable working environment. Its well-organized structure provides convenient storage space while maintaining a clean and professional appearance. Special attention has been given to cable management and heat dissipation to support the smooth operation of electronic equipment. The workstation is also compatible with adjustable monitor arms, allowing users to position displays at different angles and heights according to their needs. This flexible adjustment helps improve working posture, reduce physical fatigue, and enhance overall comfort. With its modern appearance, functional layout, and user-friendly design, the HG-A2 is an ideal solution for command centers, monitoring rooms, and professional control environments.

HG-B1 – Executive Modular Control Console

Product Description

The HG-B1 Executive Modular Control Console is designed to provide practical storage, organized equipment management, and a sophisticated appearance. It features functional storage cabinets on both sides, offering convenient space for documents, accessories, and operational equipment. The workstation follows a minimalist yet modern design approach, enhanced by an integrated backlighting strip at the rear that adds a distinctive visual appeal. Its step-style control panel and side storage cabinets create a layered appearance while maintaining a clean and organized workspace. Combining practical storage solutions, modern lighting, and an elegant structure, the HG-B1 is suitable for command centers, security monitoring rooms, and professional operation facilities.

HG-B4 – Multi-Position Modular Control Console

Product Description

The HG-B4 Multi-Position Modular Control Console is designed for large-scale control rooms that require flexible workstation arrangements and efficient space utilization. Its modular structure allows multiple workstation units to be combined freely, making it suitable for different team sizes and operational layouts. Integrated lighting enhances its modern, technology-focused appearance, while individual workstation partitions provide privacy and a more organized working environment for each operator. The flexible configuration supports both individual and team-based operations, making the HG-B4 an excellent solution for command centers, security operations, emergency response centers, and large monitoring facilities.

U-Shaped Modular Conference Console

Product Description

The U-Shaped Modular Conference Console is designed for professional meeting rooms, command centers, and collaborative working environments. Its spacious layout provides comfortable seating for multiple users while maintaining clear communication and visibility among participants. The integrated central structure offers convenient space for equipment placement and cable management, keeping the workspace organized and functional. Its modern design features a combination of smooth work surfaces, durable structural panels, and elegant accent lighting, creating a professional and sophisticated environment. The modular configuration can be customized according to room dimensions and operational requirements, making it suitable for executive meetings, team discussions, and control room operations.

Large Rectangular Conference Table

Product Description

The Large Rectangular Conference Table is designed to accommodate multiple participants in corporate meeting rooms, boardrooms, and collaborative workspaces. Its spacious tabletop provides sufficient working space for meetings, discussions, presentations, and other professional activities. The streamlined structure and clean surface design create a modern and elegant appearance that complements different office interiors. Its long rectangular configuration allows participants to sit comfortably along both sides, promoting effective communication and teamwork. The table can also be customized in terms of dimensions, seating capacity, materials, and finishing options to meet specific project requirements.

Extended Modular Control & Conference Console

Product Description

The Extended Modular Control & Conference Console is designed for large-scale operational environments that require multiple workstations and coordinated team activities. Its extended modular structure combines individual operator stations into a continuous workspace, allowing multiple users to work simultaneously while maintaining an organized layout. The workstation design supports monitor installation, equipment integration, and efficient cable management, while the integrated accent lighting enhances its modern technological appearance. Its flexible configuration allows straight, curved, and extended arrangements according to available space and operational needs. This console is particularly suitable for command centers, security monitoring facilities, emergency response rooms, and large-scale control operations.

Machine and Tools

About Our Machinery Solutions

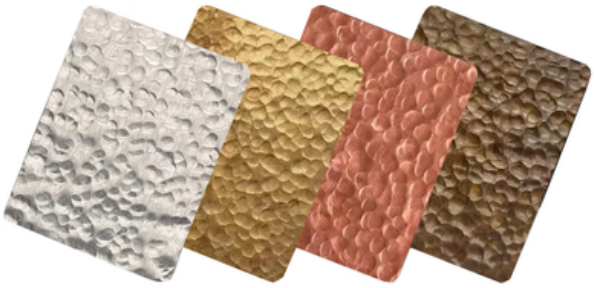

We provide a comprehensive range of industrial machinery and heavy equipment designed to support modern manufacturing, construction, fabrication, and production industries. Our solutions combine advanced technology, precision engineering, durability, and operational efficiency to meet diverse industrial requirements.
From CNC machinery and automated production systems to woodworking, metalworking, and industrial processing equipment, we offer reliable solutions that help businesses improve productivity, optimize operations, and achieve consistent quality.

Materials

Water Bubble Stainless Steel is a premium decorative metal design that combines artistic patterns with a sophisticated metallic finish. Featuring distinctive bubble-inspired textures and a contemporary appearance, it brings depth, character, and visual interest to interior spaces.

Designed for modern architectural and decorative applications, it offers an attractive solution for creating stylish partitions, feature walls, decorative panels, and statement interior elements. Its elegant appearance makes it an excellent choice for restaurants, hotels, commercial spaces, offices, and luxury residences.

Commercial Interior Service

At DOER, we believe that a well-designed commercial space is more than just an interior—it's an expression of your brand, vision, and business identity.

We provide comprehensive commercial interior design solutions that combine creativity, functionality, and modern aesthetics. From concept development to final execution, we transform ordinary commercial spaces into inspiring environments that enhance customer experiences and workplace productivity.

- **Office Interior Design**

Smart, functional, and professional office environments designed to encourage productivity and reflect your corporate identity.

- **Restaurant & Café Interior**

Unique and welcoming dining environments with creative layouts, customized furniture, decorative lighting, and premium finishes.

- **Retail & Showroom Interior**

Modern and attractive retail spaces designed to highlight products, strengthen brand identity, and improve customer engagement.

- **Hotel & Hospitality Interior**

Elegant and comfortable interior solutions for hotels, lounges, reception areas, and hospitality spaces.

- **Corporate & Business Interior**

Sophisticated interior solutions for corporate offices, conference rooms, reception areas, and business facilities.
